USAID CARIBBEAN CLEAN ENERGY PROGRAM (CARCEP)

CONTRACTOR: **DELOITTE CONSULTING LLC**

DURATION: 2015 – 2020

TOTAL PROJECTED INVESTMENT: \$14,762,353

The goal of USAID's Caribbean Clean Energy Program is to accelerate clean energy development in the region, with special focus on Jamaica and the Eastern Caribbean. These project components contribute to the host government established targets for enhancing energy security and reducing prices, while concurrently supporting national efforts to curb greenhouse gas (GHG) emissions. Key activities include support of policy formulation, private-sector leverage in clean energy investment, energy efficiency and donor coordination. The program will have an estimated total investment of US\$15 million, subject to the availability of funds.

USAID/Jamaica's clean energy activities contribute to Enhancing capacity for Low Emission Development Strategy (EC-LEDS). This is through a mix of implementation of low emissions development together with (ongoing) policy level capacity building activities on global climate change mitigation. Capacity building activities are focused on key economic sectors as identified by the Government of Jamaica in its Second National Communication under the United Nations Framework Convention on Climate Change.
